

Jelly Worms

Items needed (quantity per creation)

- 1 x 85g box Jelly crystals
- 3 x sachets of gelatin (approx 15g)
- Water
- Packet of straws

Instructions

- 1- Start by stretching out the bendy part of the straw then assembling the straws in a cup. You want to fit in as many straws as possible without squashing any.
- 2- Make the jelly as per the instructions on the box. Add in the gelatin, stir until all the jelly and gelatin crystals are dissolved.
- 3- Pour into the top of the straws, don't worry about the levels of jelly in the straws it will naturally level itself. Put in the fridge to set.
- 4- Once set, to get the worms out of the straws hold them under warm water and the worm should fall out. If not squeeze from one end and along the straw downwards. It should come out easily.
