Tinsel Trees

Items needed
(quantity per creation)

- Sheet of card
- Tinsel (approx. 2m depending on tree size)
- White craft glue
- Scissors
- Celloptape

Optional
- Embellishments

Instructions

1- Begin with a sheet of card. The size will determine the height of your tree. We cut them from all different sizes to have staggered tree sizes. Then, roll up the paper from one of the corners (as shown) and then cellotape down the flap on the side to the cone.

2- Cut off the base to the desired height that you want for your tree. Doesn't have to be perfect. Just make sure that it's pretty straight so that it will sit flat on a surface.

3- Starting from the point at the top of the tree, spread some glue all around the cone and start wrapping your tinsel around it. Add additional glue as required and continue wrapping.

Done. EASY PEASY!!!
